

...for personnel in  
**key positions**

## Get in touch

### Target groups

To fully develop its performance potential, the Motronic must be properly deployed. Our training courses impart the required knowledge to those working with the Motronic, i.e. on the job at engine and automobile manufacturers:

- ▶ Engineers with a specialty in technical sales, project management, development and calibration, who are involved in the application of Bosch engine management systems
- ▶ Employees who are working with the Bosch Motronic and the associated documentation for the first time
- ▶ New employees
- ▶ Engineers with previous experience on other systems

Successful project implementation with the right knowledge

### Training structure

The modular structure offers the right training, regardless of the depth of information you desire – from a one-day basic training course to a comprehensive four-day seminar. If your company has individual training needs, we would be pleased to conduct specially tailored seminars on your location. Therefore, we assemble various modular building blocks from our broad training program.

In each case, the knowledge presented extends from physical basics to system components to functions of ECU software. The contents of the training courses are continuously being adapted to new developments and are undergoing constant extension.

### Personal consultation and training schedule

Find out more about our training and our offer of individual seminars. We will be glad to answer your questions. You can order our current training schedule by e-mail or download it from our homepage.

# Bosch Engineering GmbH Training Bosch Engine Management

## The essential **capital:** **Knowledge...**

...unleashes **creativity** for  
innovative developments

## Bosch Engineering GmbH **Who we are**

In any corporation, knowledge is a crucial asset: Today's storage of knowledge lays the foundation for tomorrow's success. Vehicle networking demands are growing and new standards are being established. As a consequence, there is an ever-rising demand for the comprehensive and dedicated transfer of knowledge. Precisely that is the objective of our training courses, which we have developed in close consultation with the Systems Engineering Department at Robert Bosch GmbH.

### **Training objectives**

Our training courses provide you with transferable knowledge and make your work even more successful and efficient:

- ▶ Performance of Bosch engine management systems
- ▶ Bosch Motronic components and subsystems, and their interaction
- ▶ Physical models, factual background information, and their functional implementation in subsystems and main functions

### **Training benefits**

Make yourself and your team strong:

- ▶ More successful processing of your projects with clear targeting
- ▶ Reduced probation periods for new staff and for those coming from other systems
- ▶ Improved assessment of Motronic functions and features
- ▶ Accelerating the implementation of system modifications

Bosch Engineering GmbH has been developing customized solutions for electronic systems since 1999, enabling you to use proven Bosch components independently of production volume. You obtain a system entirely matched to your wishes. The emphasis here is on personal support and advice – from the first study to approval for production.

### **Our services**

- ▶ Development of systems, functions, software, and calibration for
  - Powertrain (gasoline, diesel, alternative fuels, electric/hybrid)
  - Safety and comfort (vehicle dynamics, driver assistance, functional safety, occupant safety)
  - Electrical/Electronic integration
- ▶ Development support through
  - Test services
  - Consulting
- ▶ Complete systems for motorsports

The automobile sector is not the only area where we are committed to using innovative engineering services to create optimal customer benefits. We have carried over what began with luxury vehicles, studies and special models of mass-produced vehicles to related sectors such as commercial vehicles, construction and agricultural machinery, marine and industrial applications.

More knowledge – more ability

Dynamics, economy, and lowest engine emissions – the better you know the Motronic, the more easily you will achieve these goals
